1. Required fields are denoted by an asterisk (*) and must be populated.
2. Complete the **Applicant Detail**, **Routing Detail**, and **Vehicle Detail** sections of the New Application Form.
3. The **ROUTE TO BE TRAVERSED** and **NOTES** sections can not be edited and will be populated after the route has been defined.
4. Once the **Vehicle Details** section has been populated, clicking the **Calculate** button will calculate the **TOTAL COMBINED WEIGHT** of the vehicle.
5. Clicking the **Save** button will save what has been entered into the form so far, as a Draft Application.
6. Click the **Route Validator** button once all the required information has been entered into the form to check for validation errors and to continue to the routing application.
7. Any validation errors identified by the **Route Validator** must be resolved before the user can continue to the Route Validator.
8. The interactive Routing Application is where the **Route** through the city is defined in a step by step process.
9. A **Route** is the entire path of travel through the city of Philadelphia.

Selecting Route Origin: The route's origin can be defined by a variety of methods:

<h3 style="color: #0070C0;">Search by Common Starting Points</h3>	
	<ol style="list-style-type: none"> 1. Select Common Termini from the Search for Starting Point By dropdown. 2. Select the starting point from the Select a Common Starting Location dropdown. 3. The starting point identified on the map view with a  (Point Location) symbol. 4. Select the direction of travel from the Select a Starting Direction dropdown. 5. Click the  (Start with Selected Intersection) button to set the starting point. 6. Click the  (Yes) button to confirm on the Start Route? popup. 7. Click the  (No) button to cancel.
<h3 style="color: #0070C0;">Search by Street then Intersection</h3>	
	<ol style="list-style-type: none"> 1. Select Street then Intersection from the Search for Starting Point By dropdown. 2. Enter 3 or more characters from the name of the starting point to see a list of street names with those characters to choose from. 3. Select the intersecting street from the Select an Intersection dropdown. 4. Starting point will be identified on the map view with a  (Point Location) symbol. 5. Select the direction of travel from the Select a Starting Direction dropdown. 6. Click the  (Start with Selected Intersection) button to set the starting point. 7. Click the  (Yes) button to confirm choice on the Start Route? popup. 8. Click the  (No) button to cancel.
<h3 style="color: #0070C0;">Search by Intersection</h3>	
	<ol style="list-style-type: none"> 1. Select Intersection from the Search for Starting Point By dropdown. 2. Enter 3 or more characters from the name of the starting point to see a list of intersecting street names with those characters to choose from. 3. Starting point will be identified on the map view with a  (Point Location) symbol.

Hauling Permit Route Builder Quick Reference Guide

	<ol style="list-style-type: none"> Select the direction of travel from the Select a Starting Direction dropdown. Click the Start with Selected Intersection (Start with Selected Intersection) button to set the starting point. Click the Yes (Yes) button to confirm choice on the Start Route? popup. Click the No (No) button to cancel.
--	---

Select Starting Intersection From Map

	<ol style="list-style-type: none"> Select Select Intersection From Map from Search for Starting Point By dropdown. On the map view, zoom into the area of the starting point of the route until you can see the small red dots at all the street intersection. Click the dot that most closely represents the starting point of the route. Starting point will be identified on the map view with a  (Point Location) symbol. Select the direction of travel from the Select a Starting Direction dropdown. Click the Start with Selected Intersection (Start with Selected Intersection) button to set the starting point. Click the Yes (Yes) button to confirm choice on the Start Route? popup. Click the No (No) button to cancel.
---	---

Adding Streets: Build your route by adding one street at a time by:

Adding streets to route leg from a list

1. Click the **Continue to ...** dropdown to see a list of all the cross streets on the route leg listed in order of distance from the current location.
2. Hovering over a cross street in the list will update the route displayed on the map view to show the route if that point were to be selected.
3. Select the next street to add to the route leg.
4. Click the **Add Street** (Add Street) button to add street segment to the route leg.
5. Continue adding street segments until the destination of the route leg is reached.
6. Click the **Save** (Save) button to save the route leg.
7. Click the **Cancel** (Cancel) button to undo the changes.

Adding streets to the route from selecting intersections on the map

1. The current location will be marked on the map with a (Point Location) symbol.
2. Map view will display a series of green dots at the cross streets from starting point.
3. Click green dot to select street segment selection from the map view.
4. Click the **Add Street** (Add Street) button to add the street segment to the route leg.
5. Continue adding street segments until the destination is reached.
6. Click the **Save** (Save) button to save the route leg.
7. Click the **Cancel** (Cancel) button to undo the changes.

Route Warning Messages

1. Some street segments within the city can have weight and height restrictions.
2. Some street segments require special permits before they can be traversed.
3. If a street segment which violates one or more of these conditions is selected, **Route Builder** provides warning messages below the selected street, in **RED** text.
4. When street is added to the route, warning messages are presented in a popup.
5. To add the street to the route leg anyway, click the **Yes** (Yes) button.
6. Click the **No** (No) button to return to the edit view.

Route Warning Message Details

1. If the route leg contains streets with warnings, a ⚠ (Warning) icon will be displayed to the right of those streets in the street route leg list.
2. To see the details of the warning, click the ⚠ (Warning) icon.
3. The warning message will appear in **RED** below the street segment with the issue.

Allowing One Way Violations

1. Check the **Allow One Way Violations?** checkbox to allow the route choices to include traveling the wrong way on one way streets.
2. One way violations will be displayed in the **Continue To:** list in **RED** text.
3. If a street segment with a one way violation is added to the route, a reason must be provided.

Adding a Leg to the Route

- A **Route Leg** has a distinct beginning and end. **Most routes will only have one leg.** If the route must leave the City limits to avoid a restriction, the user can create separate legs for each portion of the route within the city limits.
4. To add additional legs to the route, save the route by clicking the **Save** (Save) button.
 5. Click the **Add Route Leg** (Add Route Leg) button to add an additional Leg to the route.
 6. Select the starting point for the next leg of the route.
 7. Repeat the process of adding street segments to the next leg of the route.
 8. Each route leg can be edited separately by clicking the **Edit** (Edit) button.
 9. Each route leg can be removed separately by clicking the **Remove** (Remove) button.

Saving and Editing the route: a route can be edited and saved before it is finalized

Saving the Route Leg

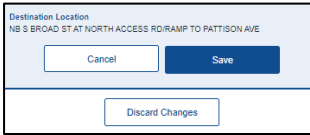

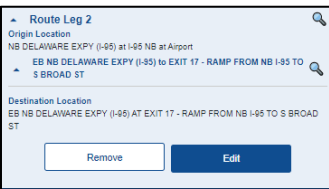

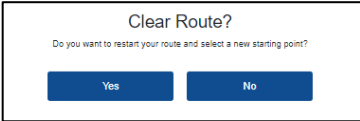

1. At any time, clicking the **Save** (Save) button will create a save point for the route leg being edited. The saved route leg can be reopened for editing.

Editing a Saved Route Leg

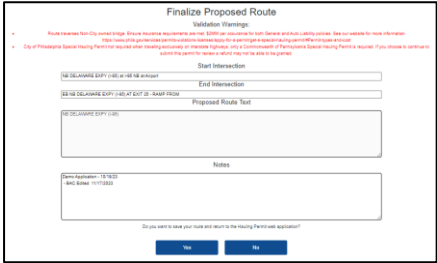

1. To continue to edit a route leg that has been saved, click the **Edit** (Edit) button for the route leg to be edited.

<h2>Discarding changes to Saved Route Leg</h2>	
	<ol style="list-style-type: none"> To discard the changes to the route leg since it's last save point, click the <input type="button" value="Discard Changes"/> (Discard Changes) button. In the Discard Route Changes? popup, click the <input type="button" value="Yes"/> (Yes) button to restore the route to the last save point.
<h2>Removing a Street from a Route Leg</h2>	
	<p>A list of the streets that have been selected will be presented in the Street Selection panel while editing a route.</p> <ol style="list-style-type: none"> To Remove a street from the route leg, click the <input type="button" value="x"/> (x) symbol next to the street to be removed. Confirming the Remove Segments(s) From Route? popup by clicking the <input type="button" value="Yes"/> (Yes) button will remove the selected street and all subsequent streets from the route leg. Continue building the route from the last street segment before the removal.
<h2>Removing a Leg from the Route</h2>	
	<ol style="list-style-type: none"> If the route is composed of multiple legs, an entire leg can be removed from the route by clicking the <input type="button" value="Remove"/> (Remove) button below the leg of the route to be removed. Confirming the Remove Route Leg From Route? popup by clicking the <input type="button" value="Yes"/> (Yes) button will remove the selected leg and all street segments associated with that leg, from the route.
<h2>Clearing the Route</h2>	
	<ol style="list-style-type: none"> To discard the entire route and restart defining the route from the beginning, click the <input type="button" value="Clear Route"/> (Clear Route) button. In the Clear Route? Popup, clicking the <input type="button" value="Yes"/> (Yes) button will allow a new starting point for the route to be selected.

Finalizing the route: Complete the route and return to the Application Details form

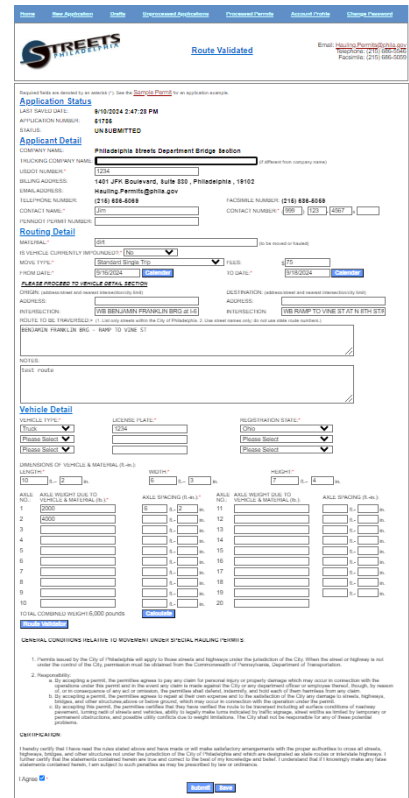

Completing the Route

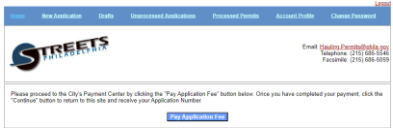

- Once the destination of the route has been reached, click the **Complete Route** (Complete Route button to review and finalize the route.
- The **Finalize Proposed Route** screen will be presented, which includes the **Start Intersection, End Intersection**, as well as the **Proposed Route Text** that will appear on the final application.
- A list of route **Validation Warnings** and informational messages associated with the proposed route may also be displayed.
- Any additional comments about the route will be displayed in the **Notes section**.
- Click the **Yes** (Yes) button to finalize the route and return the user to the Application Details Form.

Submitting the application: The final step is to submit the application with the route to be traversed added

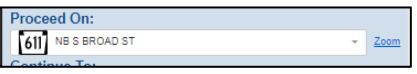

Application Submission

- Completing the route will return the user to the Application Details Form.
- The Status of the Application will be **UNSUBMITTED**.
- The **ROUTE TO BE TRAVERSED** box will be populated with the route specified in the routing application.
- Any notes added when completing the route will be presented in the **NOTES** box.
- Clicking the **Submit** button will submit the application for review by Philadelphia Streets.

Paying Application Fee	
	<ol style="list-style-type: none"> 1. Clicking the Pay Application Fee button will take the user to the Payment Center where any outstanding fees can be paid.

Map Tools: Helpful Tools While Using the Map View

Back to Application Detail	
	<ol style="list-style-type: none"> 1. At any time, clicking Back to Application Details link will return the user to the Application Details Form.
Zoom to a street on the route	
	<ol style="list-style-type: none"> 2. At any time, clicking the  (Magnifying Glass) icon next to a street on the route will zoom the map view to that location.
Zoom to current edit point on route	
	<ol style="list-style-type: none"> 1. While building the route, clicking the Zoom (Zoom) link will zoom the map to the point where the route leg is currently being edited.
Zooming In and Out in the Map	
	<ol style="list-style-type: none"> 1. The map view can be zoomed in and out by using the map zoom in and out  buttons located in the top right corner of the Map View.
Zoom to an Address or specific place on the Map	
	<ol style="list-style-type: none"> 1. The map view can be zoomed to a specific location by using the Find address or place tool in the bottom right corner of the Map View.
Selecting a Basemaps	
	<ol style="list-style-type: none"> 1. The default basemap for the routing application is the Streets basemap. 2. To view the grid of available basemaps, click the  (basemap) button in the bottom left-hand corner of the Map View. 3. Clicking on a basemap in the grid will update the basemap used in the map view. 4. Click the  (basemap) button again to close the grid of available basemaps. 5. Clicking the  (Clear Basemap) button will reset to the default basemap Streets.
